COFACTOR: Binds 3 manganese ions per subunit (By similarity).
PATHMAY: Arginine biosynthesis.
PATHMAY: Pyrimidine biosynthesis; first step.
SUBUNIT: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used k
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: BELONGS TO THE CARB FAMILY.

"Cloning, genetic organization, and characterization of a structural gene encoding bacillopeptidase F from Bacillus subtilis.";

J. Biol. Chem. 265:6845-6850(1990).

It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

-!- SUBCHILLAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).

-!- SUBCLULAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beall B., Lowe M., Lutkenhaus J.;

-!- FUNCTION: STABILIZES TBP BINDING TO AN ARCHAEAL BOX-A PROMOTER. ALSO RESPONSIBLE FOR RECRUITING RNA POLYMERASE II TO THE PRE-INITIATION COMPLEX (DNA-TBP-TFIIB) (BY SIMILARITY).

-!- COPACTOR: Binds 1 zinc ion per subunit (By similarity).

-!- SIMILARITY: Belongs to the TFIIB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Kawarabayasi Y., Sawada M., Horikawa H., Haikawa Y., Hino Y., Yamanoto S., Sekine M., Baba S.-I., Kosugi H., Hosoyama A., Nagai Y., Sakai M., Ogura K., Otsuka R., Nakazawa H., Takamiya M., Ohfuku Y., Funahashi T., Tanaka T., Kudoh Y., Yamazaki J., Kushida N., Oguchi A., Aoki K.-I. Required for development of the roof plate and, in turn, for specification of dorsal cell fates in the CNS and developing vertebrae (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                      IsoId=Q8TE12-2; Sequence=VSP 003112; TISSUE SPECIFICITY: Isoform 1 is expressed in many tissues. Not found in heart, liver, spleen and testis. Relatively highly expressed in fetal brain. Isoform LMXIA-4B is expressed in testis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Nuclear (By similarity). -!- CATALYTIC ACTIVITY: ATP + L-citrulline + L-aspartate = AMP + diphosphate + L-argininosuccinate.

-!- PATHMAY: Arginine biosynthesis; seventh step.

-!- SUBUNIT: Homotetramer (By similarity).

-!- SUBUNIT: Belongs to the argininosuccinate synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacteria; Proteobacteria;

"Short arm region of laminin-5 gamma2 chain: structure, mechanism of processing and binding to heparin and proteins.";

J. Mol. Biol. 314.751-763(2001).

C. FUNCTION: Binding to cells via a high affinity receptor, laminin to thought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

C. e. SUBUNIT: Laminin is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule comprising one long and three short arms with globules at each cend. The gamma-2 chain is a subunit of laminin-5 (epiligrin/kalinin/nicein) and binds fibulin-1, fibulin-1c, fibilin-2 and nidogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MOUSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-FEB-2003 (Rel. 41, Last sequence update)
15-SEP-2003 (Rel. 42, Last annotation update)
Laminin gamma-2 chain precursor (Kalinin/nicein/epiligrin 100 kDa subunit) (Laminin B2t chain).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Q61092;
